DETAILED ACTION

Reopen prosecution after filling the Appeal Brief.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lajara et al. (US 6,362,968 B1) in view of Jackson et al. (US 6,452,809 B1).

Regarding claims 1-3, Lajara et al. disclose a circuit board assembly comprising

a printed circuit board (12) having an electrical connector disposed along an edge
(see Figure 1B);

a metal stiffener (14, 16, 17) for supporting the board when densely populated
electronic components (column 6, lines 44-48).

Lajara et al. do not disclose a nonconductive base.

Jackson et al. teach an insulative base (244) is positioned between a circuit board
(200) and host board (210).

It would have been obvious to one having ordinary skill in the art at the time the
invention was made to provide an insulative base into Lajara et al.'s circuit board
assembly, as taught by Jackson et al. to prevent short circuit.

Art. Unit: 2833

Regarding claim 4, the modified circuit board assembly of Lajara et al. in view of Jackson et al. disclose the circuit board further includes electrical connectors (11)

Regarding claim 5, the modified circuit board assembly of Lajara et al. in view of Jackson et al. disclose a plurality guides having slots (see Figure 1B, the connectors 11 having a housing and a slot which become a guide for receiving circuit cards, such as memory card).

Regarding claim 6, the modified circuit board assembly of Lajara et al. in view of Jackson et al. disclose the guides are affixed to the stiffener (since the guides are on the motherboard which is affixed to the stiffener, therefore the guides also affixed to the stiffener indirectly).

Response to Arguments

3. Applicant's arguments filed 12/23/2002 are moot of in view of new ground rejection.
